Preliminary Instructions: Phone Suite Installation and First Use

The software PhoneSuite can be used directly from CD or after installation on the PC.
In any case, when using the application for the first time, it's necessary to copy the USB driver on the PC before launching PhoneSuite.
The driver will be automatically copied on the PC hard disk when selecting "**Copy Driver on PC**" from the Main Menu, that will be visualized after inserting the PhoneSuite CD.

1. connect to the PC the USB cable that should have come with your mobile;
2. connect the USB cable to the mobile phone;
3. at this point, the phone screen will show the following three options: 1. mass storage - 2.
4. com port;
5. select the "com port"option;
6. the PC will install the 6218 USB Modem Driver on the PC;
7. launch PhoneSuite application; if the application is used directly from CD, click on "**Start PhoneSuite from CD**" from the Main Menu; if you want to install the application on your PC, click on "**Install PhoneSuite on PC**" from the Main Menu, then select the desired installation path (or accept the default path) and start the application using the desktop shortcuts or the Start Menu;
8. the lower side of the PhoneSuite screen will show now the notice "Connected!";
9. now you can use the Phone Suite application: please see the following instructions for further details.

NOTE: during the installation procedure, it is possible to get a messagge on the PC screen warning that the software has not passed the testing to verify its compatibility with Microsoft products. In any case this software has been tested for a long time with Microsoft systems and it's virus-free guaranteed.

Welcome to PhoneSuite

PhoneSuite provides various functionalities for users to manage their mobile phone easily on PC side. It will communicate with mobile phone via serial communication, IrDA or Bluetooth.

- **Phonebook** is used to manage the contacts information between mobile phone and PC folder. In addition to adding, editing and deleting contacts, users can get the phonebook database on hand and backup them to PC folder. PhoneSuite also imports contact list from Lotus Notes, Outlook, and Outlook Express. Users can copy these information to the PC folder or mobile phone.

- **Message** helps users to read, edit and send SMS/EMS messages directly from PC. Besides, you can create personal folders to categorize all messages on PC side.

- **Settings** contains the system-related settings and message default settings. Users also can set whether they want to import contact list from other software or not here.

- **MMS Message** helps users to read, edit MMS messages directly from PC. Users also can transport MMS messages between PC and mobile phone. Whether this functionality is supported or not depends on the mobile phone connects to PhoneSuite.
